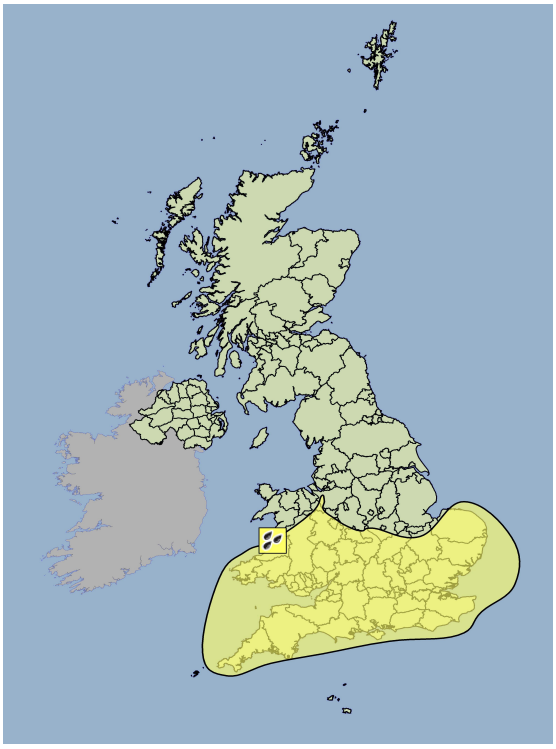
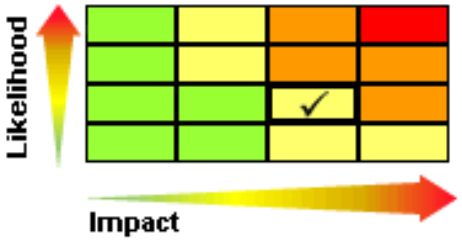
National Severe Weather Warning Service





Chief Forecasters Assessment
Yet another storm is expected to develop near the Azores, then run northeastwards across England and Wales during Friday and into Saturday, before clearing to the northeast. The associated frontal systems will bring spells of heavy and persistent rain, especially across the southern parts of England and Wales as well as further very strong winds.

There remains some uncertainty in the track and timings of this system, but it seems most likely that further periods of heavy rain will affect much of the UK and in particularly Wales and southern England on Friday and into Saturday.

Please monitor the website for further updates to this alert over the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **06:00 on Fri, 14th Feb 2014** until **12:00 on Sat, 15th Feb 2014**

A new area of rain will push into the UK from the southwest on Friday morning, moving quickly northeastwards and affecting many parts of England and Wales. Following this rain areas of organised showers will push across Wales and the south of England, adding to the rainfall accumulations. With very wet ground conditions in Wales and the south of England and following repeated heavy rainfall events earlier in the week, the public should be aware of the potential for further flooding in places. The rain will clear away from these most sensitive areas during Saturday morning. The impacts from this rainfall may continue on some rivers on subsequent days and further information may be found by visiting the Environment Agency website or by calling the Environment Agency Floodline.

This is an update to the Alert first issued on Monday.
